who we are INNOVATIVE SKINCARE

The INNOVATIVE SKINCARE® international team of experts includes specialists in the fields of botanical pharmacology, molecular biology, biochemistry and medicine, who are responsible for some of the greatest advances in the fields of skincare and anti-aging

Our global approach to research and development provides INNOVATIVE SKINCARE® the unique ability to combine traditional botanical medicine with advanced technological formulation expertise. All of our products are created using the highest quality

INNOVATIVE SKINCARE®, the makers of iS Clinical, a leading Professional Cosmeceutical brand, is available through leading Dermatologists, Plastic Surgeons, Physicians, Medical Institutions and Skin Care Experts globally.

We invite you to experience remarkable improvements in your appearance with younger, healthier, and more radiant looking skin.

We at INNOVATIVE SKINCARE® are DEDICATED to developing clinically validated skincare products that improve the physical and emotional well-being of people globally. We employ the highest ethical standards as we advance the science of skin health, ONE FACE AT A TIME.

INNOVATIVE SKINCARE™'s breakthrough Extremozyme® technology features advanced formulations of highly specialized enzymes developed via natural selection to allow micro-organisms to survive in extreme environments of pressure, heat, cold, dryness, salt, pH, and radiation. These unique enzymes, called "Extremozymes", protect cells and biological macromolecules from damage by external stresses which helps PROTECT and REPAIR your skin in an unprecedented and exceptional manner.

WHERE THEY ARE FOUND

Extremozymes are derived from organisms that thrive in physically or geochemically extreme conditions, places where most other life forms cannot survive. Potent natural protective enzymes are manufactured by these organisms, allowing them to live in the most extreme, adverse conditions on the planet. The variety of these Extremozymes include:

-  **HYPOLITHS** from the coldest, driest deserts
-  **CRYOPHILES** or **PSYCHROPHILES** which thrive in temperatures below -15 degrees C, found in polar ice
-  **PIEZOPHILES** from deep ocean trenches
-  **THERMOPHILES** which survive in temperatures from 60 to 80 degrees C, found in hydrothermal vents
-  **POLYEXTREMOPHILES** which thrive in a number of adverse environments

HOW THEY WORK IN NATURE

Extremophilic systems developed by these organisms work by protecting fragile protein and DNA components via conservation of water molecules, protein folding, cushioning, enveloping and otherwise protecting critical molecules. Many Extremozymes assist these organisms in not only protecting, but repairing DNA as it is damaged by environmental factors.

HOW THEY WORK ON YOUR SKIN

INNOVATIVE SKINCARE® has drawn from the natural selection processes of extremophilic organisms, pioneering the future of skincare in terms of ultimate protection and healthy skin.

The stressors found in extreme environments and those presented to the skin on a daily basis are more than similar. Exposure of structural proteins such as collagen and elastin as well as essential genetic DNA to the environment causes aging, with loss of elasticity, resilience, immune function, cancer resistance, and other beneficial qualities. INNOVATIVE SKINCARE®'s Extremozyme® products utilize the survival advantages from these extremophilic organisms to protect and preserve skin from environmental damage and aging by combating moisture loss, dehydration, radiation, heat, cold, and free radical damage.

Extremozyme® technology is clinically proven to help prevent DNA damage resulting in dramatic anti-aging improvements.
